Safety Relief Valve Lapping Reseater

Make better use of your labor by eliminating hand lapping your Safety Relief Valves. The Dexter ALP 9312 Lapping Reseater is a revolutionary way to Lap SRV Nozzles and Discs both In-Line and in the Shop. Achieve the flattest surfaces possible by utilizing the same techniques used in manual lapping with the repeatability of a machine.

ALP 9312
PATENT PENDING

Features

- Eccentric non-rotational motion provides a flat sealing surface.
- Micrometer adjustment for repeatable plate pressure.
- Levered Arm Linkage System for fast, concentric set-up.
- Unobstructed view of the plate while in the valve.
- Wide mounting range 2 1/2" to 16" diameters.
- Lightweight, a complete unit with drive is only 17 pounds.
- Grinding Plates and abrasives for D thru T
- Lapping Plates and compounds for D thru T
